Art Unit: 1712

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 7, 8, 14, 15 and 20 rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over the Kim '991 Patent.

Kim discloses golf balls having a cover of Pebax 2533, ionomer and Lotader (table 1). Pebax is a polyetheramide (col. 10 line 16). Lotader is an ethylene/acrylate/glycidyl methacrylate copolymer.

Claims 1, 7, 8, 14, 15 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kashiwaga '182 or Takesue '991 or Ichikawa '819 optionally in view of Sullivan '870.

Art Unit: 1712

Kashiwaga (#3), Takesue (#7-9) and Ichikawa (#8, 11) exemplify golf ball covers of glycidyl acrylate polymer with metallocene polymers, polyurethanes or polyetheresters. The references do not measure COR compression.

The claimed COR and compression ranges are merely the conventional values for typical golf balls. Sullivan (tables 2, 3) report COR and compression values for many commercial golf balls. It would have been obvious to keep the COR/compression of Kashiwaga or Takesue or Ichikawa within normal ranges.

Claims 2-6, 9-13 and 16-19 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The art of record does not suggest using the composition as an inner cover.

An obvious double patenting rejection over the parent is prohibited due to the previous examiner's restriction requirement.
